Definitions and Remarks

Amortisation Test

The interest and principal coverage test is done at the CPR/CDR and loss given default which is derived from a KBC proprietary risk model.

Costs, Fees and Expenses Related to Covered Bonds are simulated based on the assumption of a fixed amount of EUR 5 million p.a. and 5 bp on the outstanding mortgage loan balance.

Liquidity Test

The Liquidity test is done at the CPR/CDR and loss given default which is derived from a KBC proprietary model.

Costs, Fees and Expenses Related to Covered Bonds are simulated based on the assumption of a fixed amount of EUR 5 million p.a. and 5 bp on the outstanding mortgage loan balance.

Current Loan to Value

Current Loan to Current Value is defined as the ratio of the sum of the current balance of the residential mortgage loans divided by the sum of the non-indexed property values on which KBC was granted a first ranking mortgage inscription by the client.

Current Loan To Mortgage Inscription

Current Loan to Mortgage inscription is defined as the ratio of the sum of the current balance of the residential mortgage loans divided by the sum first ranking mortgage inscriptions excluding mandates by the client.

Interest Type

The interest type "Fixed" means that the interest rate of a loan is fixed during the entire life of the loan. The interest types "X/Y/Y" are interest types whereby the loan has a first fixed interest period of Y years followed by fixed interest periods of X years. A 10/5/5 is hence a loan that has an interest rate that is fixed during the first 10 years after which it will reset and have fixed interest periods of 5 year. The interest resets are legally defined in Belgium and are based on the OLO rates.

Prepayments

The monthly percentage is defined as: Prepayments during the month / Principal balance of Mortgage Loans at beginning of the calculation period.

The annualised prepayment rate (CPR) is defined as: 1 - (1 - monthly percentage) ^ 12.
